

Vacuum Ejector with Solid State Timer

Series ZMA

**Incorporates solid state timer function for release valve control
(Timer setting with PLC is unnecessary)**

**Allows sharing of switch/valve power supply, and single line for suction signal
(Valve wiring is unnecessary)**

Timing Chart

Note) When power is supplied, release output is performed once for the time period only.

**Timer can be easily adjusted without programming
(Reduction of the load of PLC)**

Vacuum Ejector With Solid State Timer Series ZMA

How to Order

ZMA 07 1 H -K 5 -T14 C -L

Nozzle diameter

05	0.5 mm
07	0.7 mm
10	1.0 mm
13	1.3 mm
15	1.5 mm

Body type

1	For single unit
3 ^{Note)}	Common SUP for manifold
5 ^{Note)}	Individual SUP for manifold

Note) When the product is used for the manifold, the exhaust air of the operating ejector may enter the vacuum port (V) of the non-operating ejector and be released if there are an operating and non-operating ejector. In order to reduce the exhaust intrusion, consider using a special double check valve (-X107).

Standard supply pressure

M	0.35 MPa
S	0.45 MPa
H	0.5 MPa

* Refer to "Table (1)" for selection of standard supply pressure and nozzle diameter.

Release flow rate adjusting needle

Nil	Without lock nut
L	With lock nut

Electrical entry of vacuum switch (Connector type)

C	Lead wire length 0.6 m
CL	Lead wire length 3 m
CN	Without lead wire

* Refer to "Table (2)" for lead wire with 4-wire connector.

Switch model

T14	1 point setting, No analog output available 3 turns, NPN output
T54	1 point setting, No analog output available 3 turns, PNP output

Solenoid valve rated voltage

5	24 VDC
---	--------

Valve

K	With air supply valve, Vacuum release valve
---	---

Thread type

Nil	Rc
T	NPTF
F	G*

* G thread
The thread ridge shape is compatible with the G thread standard (JIS B0203), but other shapes are not conforming to ISO16030 and ISO1179.

Table (1)
Combination of Nozzle Diameter and Standard Supply Pressure

Nozzle diameter	Standard supply pressure (MPa)		
	M (0.35)	S (0.45)	H (0.5)
0.5 mm	—	—	●
0.7 mm	●	—	●
1.0 mm	●	—	●
1.3 mm	●	●	●
1.5 mm	—	●	—

Table (2)

Lead wire with 4-wire connector	P5022-6-1 (0.6 m)
	P5022-6-2 (3 m)

Vacuum Ejector With Solid State Timer **Series ZMA**

Model

Nozzle diameter (mm)	Model	Standard supply pressure			Maximum suction flow rate ℓ/min (ANR)	Air consumption ℓ/min (ANR)	Diffuser construction
		H	M	S			
0.5	ZMA05 □ H	0.5 MPa	—	—	15	17	Double diffuser
0.7	ZMA07 □ H				30	30	
1.0	ZMA10 □ H				50	60	
1.3	ZMA13 □ H				66	90	
0.7	ZMA07 □ M	—	0.35 MPa	—	23	33	
1.0	ZMA10 □ M				38	60	
1.3	ZMA13 □ M				44	85	
1.3	ZMA13 □ S	—	—	0.45 MPa	37	88	Single diffuser
1.5	ZMA15 □ S				45	110	

Vacuum Ejector Specifications

Fluid	Air
Max. operating pressure	0.7 MPa
Max. vacuum pressure	−84 kPa
Supply pressure range	0.25 to 0.55 MPa
Operating temperature range	5 to 50°C
Suction filter	Polyethylene sintered metal (30 μm)

Valve Specifications

How to operate	Pilot type
Main valve	Poppet
Effective area (Cv factor)	3 mm ² (0.17)
Operating pressure range	0.25 to 0.6 MPa
Electrical entry	Plug connector
Max. operating frequency	5 Hz
Voltage	24 VDC

Vacuum Switch with Timer Specifications (for controlling solenoid valve)

Power source	Operating voltage	24 VDC ±10%
	Consumption current per one unit	1.1 W (at switch output OFF)
Sensor switch output	Number of output	1
	Output	NPN/PNP open collector
	Setting trimmer	3 turns
	Operation indicator light	Red LED lighting
	Temperature characteristics	±3% FS or less
	Hysteresis	3% FS or less (fixed)
Part of timer	Timer period	20 to 2,000 ms
	Setting trimmer	3 turns
	Temperature characteristics	±3% FS or less

Connection Example

T14

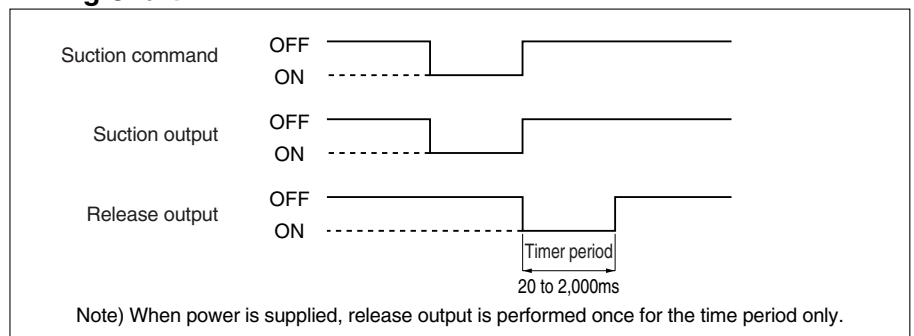

T54

VL: Pilot valve for release
Vs: Pilot valve for supply

How to Read Flow Characteristics Graph

Flow characteristics are expressed in ejector vacuum pressure and suction flow. If suction flow rate changes, a change in vacuum pressure will also be expressed. Normally this relationship is expressed in ejector standard supply pressure. In graph, P_{max} is max. vacuum pressure and Q_{max} is max. suction flow. The values are specified according to catalog use. Changes in vacuum pressure are expressed in the order below.

1. When ejector suction port is covered and made airtight, suction flow is 0 and vacuum pressure is at maximum value (P_{max}).
 2. When suction port is opened gradually, air can flow through (air leakage), suction flow increases, but vacuum pressure decreases (condition P_1 and Q_1).
 3. When suction port is opened further, suction flow moves to maximum value (Q_{max}), but vacuum pressure is near 0 (atmospheric pressure).
- When vacuum port (vacuum piping) has no leakage, vacuum pressure becomes maximum, and vacuum pressure decreases as leakage increases. When leakage value is the same as max. suction flow, vacuum pressure is near 0. When ventilative or leaky work must be adsorbed, please note that vacuum pressure will not be high.

Specific Product Precautions

Be sure to read before handling.

Refer to front matters 38 and 39 for Safety Instructions and pages 844 to 846 for Vacuum Equipment Precautions.

Mounting

Warning

1. Do not drop or bump.
Do not drop, bump or apply excessive impact (1,000 m/s²) when handling. Even if the switch body is not damaged, the switch may suffer internal damage that will lead to malfunction.
2. Hold the product from the body side when handling.
The tensile strength of the power cord is 49 N, and pulling it with a greater force can cause failure.
3. When handling the product, never move or loosen the switch assembly or the switch assembly mounting screws.

Wiring

Warning

1. Do not allow repeated bending or stretching forces to be applied to lead wires.
Wiring arrangements in which repeated bending stress or stretching force is applied to the lead wires can cause broken wires.

Pressure Source

Warning

1. Vacuum pressure switches
There will be no change in performance if a pressure of approximately 0.5 MPa is applied momentarily (when releasing vacuum), but care should be taken that pressures of 0.2 MPa or more are not applied on a regular basis.

Operating Environment

Warning

1. The product cannot be used in a strong magnetic field.
